

“Cisco Jasper helps Alarm.com offer simple, secure and complete end-to-end solutions with unmatched scale and a broad ecosystem of connected devices.”

Tor Soevik, VP of Global Operations

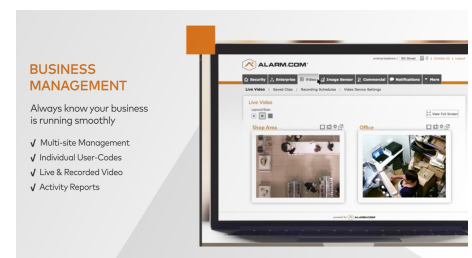

Alarm.com uses Control Center to efficiently scale to millions of users worldwide, while simplifying device management and ensuring maximum reliability for customers.

Alarm.com accelerates time to market for reliable smart home security services

Alarm.com is a pioneer in cellular communications for smart home services and operates one of the largest, cellular-based M2M platforms in the world. Using Control Center, they efficiently manage deployed solutions to meet the rigorous reliability standards for home security and expectations of their customers.

Control Center also gives Alarm.com unique visibility into connectivity costs, helping them optimize rate plans to cost-effectively manage and grow the business. The company rapidly scales by leveraging Cisco Jasper partnerships with network service providers worldwide, giving them the agility to launch turn-key deployments in new markets in as little as 15 minutes.

Real-time monitoring and remote diagnostics equip Alarm.com to rapidly identify and resolve issues

Real IoT results with Cisco Jasper Control Center:

- Speed time to market – Alarm.com drives growth with automated connectivity management to quickly deploy new devices
- Ensure the highest reliability – Real-time monitoring and remote diagnostics equip Alarm.com to rapidly identify and resolve issues
- Scale seamlessly – With Cisco Jasper’s global network partnerships, Alarm.com can easily enter new markets, getting set up with new service providers in minutes
- Control costs – Alarm.com reduces OpEx by tracking data usage and costs across all global deployments, and automatically adjusting rate plans
